Ball bearing - WikipediaA ball bearing is a type of rolling-element bearing that uses balls to maintain the separation between the bearing races. The purpose of a ball bearing is to reduce rotational friction and support radial and axial loads. As one of the bearing races rotates it causes the balls to rotate as wellBall-bearing Meaning | Best 8 Definitions of Ball-bearingBall-bearing meaning · A friction-reducing bearing consisting essentially of a ring-shaped track containing freely revolving hard metal balls against which a rotating
